DPF Treatment method	Advantages / Disadvantages	DPF Treatment method	Advantages / Disadvantages
Flash Cleaning Patented system	<ul style="list-style-type: none"> ✓ Total removal of soot, <u>ash</u> & oil ✓ Safety and integrity of the filter (incl sensors) is preserved ✓ Efficient cleaning of <u>all</u> DPF types ✓ 1-2 hour treatment time 	Forced regeneration	<ul style="list-style-type: none"> ✓ Performed without removing the DPF ✗ Ineffective: Removes soot, but NOT all ash. Filter will re-block more quickly ✗ Repeated forced regenerations can melt the DPF core
Chemical Additive	<ul style="list-style-type: none"> ✓ Easy and cheap ✗ Ineffective: Removes soot, but NOT all ash. Filter will re-block more quickly 	Other treatments	<ul style="list-style-type: none"> ✗ Ultrasonic: Risk of thermal shock to noble metals; 12-24 hr treatment time ✗ Heat treatment: Melting of cerium with filter walls; risk damaging filter due to cutting/welding
